

NARRANDERA WATER

INFORMATION SUMMARY

Narrandera Shire Council is in the process of working on improvements to the quality of water supplied to Narrandera township residents. This involves the preparation of the Integrated Water Cycle Management (IWCM) plan and an ongoing program of physical works that is subject to funding.

WATER TREATMENT FACILITY TIMELINE

ABOUT OUR WATER

As part of the Water Treatment Plan scoping study, contractors conduct frequent public Water Palatability Taste Testing.

Testing is conducted weekly across 15 locations around Narrandera.

The bore upgrade program was completed in 2017, new filters have been introduced and aerators replaced.

Bacteria testing by NSW Health is consistently negative meaning the water is not able to cause bacterial health issues.

In 2017 the duplication of the rising water main was completed.

Testing is conducted daily at all water reservoirs.

NARRANDERA WATER INFORMATION SUMMARY

Narrandera Shire Council is in the process of working on improvements to the quality of water supplied to Narrandera township residents. This involves the preparation of the Integrated Water Cycle Management (IWCM) plan and an ongoing program of physical works that is subject to funding.

ABOUT THE TOWN WATER PIPE SYSTEM

Annual pipe cleaning and regular flushing is carried out across town based on registered complaints particularly in areas of significant dirty water issues.

While the water project will help to improve water taste, premises connected to the older pipe system in Narrandera may still experience water discolouration.

NSC currently is undertaking a program of works to replace the cast iron water mains and pipes which can cause discolouration.

There are ongoing works to reduce the amount of water main dead-ends, and annual replacement of 10 control valves.

Approximately 2km of replacement works are completed each year on the water main pipes in Narrandera.

WATER FILTERS AVAILABLE

- You can request a free household water filter from Council to install on the property side of the water main.
- The unit comes with 3 filter cartridges, and can last up to two years dependant on water quality.
- Filters are to be cleaned as required. If a cleaned filter is stained it is still effective and functional.
- If your premises is experiencing dirty water, please scan the QR code below to go to the council website to lodge a complaint so that it can be investigated.
